

Now you can print impeccable spreadsheets, formal business letters and even complete marketing proposals with phenomenally quiet ink-jet printer technology. Plus, this incredible wide-carriage printer is actually **SMALLER** than many narrow-carriage printers.

The Ink-Jet Solution **FOR YOUR LETTERS, SPREADSHEETS AND MORE**

Forget wasting time changing between wide spreadsheet paper and letter-size paper. And, forget printers that disturb people in your office, your phone conversations or sleeping family members. Now you can print everything from 136-column spreadsheets to standard-size letters (or anything in between) on this blazing-fast, whisper-quiet **LETTER-QUALITY Kodak Diconix ink-jet printer**. Plus, add the **FREE** bonuses I've included and it's a **\$1,669 value blasted to \$399**.

By Drew Kaplan

It's superb quality printing, hassle-free. Whether you use your computer at work or at home, whether you write business letters or create wide spreadsheets (or both), now you can attack your printing projects with the latest ink-jet weaponry.

Plus, with this printer's amazing two-way paper handling, you'll never have to waste time by manually switching between fan-fold paper and individual sheets of paper again. It's all automatic.

And, because it's an ink-jet printer, it's incredibly quiet. You can even talk on the phone without being disturbed.

Plus, at a blazing 310 characters-per-second, you'll be amazed at how fast you

business-quality printing.

But, last year Kodak developed a new ink that produces a superb quality print output on **REGULAR PAPER**.

So now, when you snap one of Kodak's new plain-paper ink-jet cartridges into this state-of-the-art Kodak Diconix ink-jet printer, you can print spreadsheets on regular OR wide paper at a supersonic 310-cps.

But, spreadsheets are just part of the story. If you're a small businessman like I am, you probably print lots of letters, too.

Well, with this **letter quality** ink-jet marvel, you can print everything from office memos to business letters to graphics-filled marketing proposals to complex desktop-published instruction manuals.

And, you can do all this without ever unloading your wide or standard tractor-feed fan-fold paper. Plus, oh is it quiet.

SHHHHHH, QUIET PLEASE

Forget the grating clatter of dot-matrix and daisy-wheel impact printers that wallop paper with pins and hammers. This ink-jet printer uses a series of microscopic jets that silently drop ink right onto your paper.

The result? Now you can use your home computer at night to quietly print your projects without disturbing the kids.

And, if you work in an 'open' office, now you can print your memos, letters and spreadsheets anytime you like without bothering the people around you.

In fact, if you work in a library, hospital, bank, court room, brokerage house or any other place that demands quiet, you'll fall in love with this incredibly quiet printer.

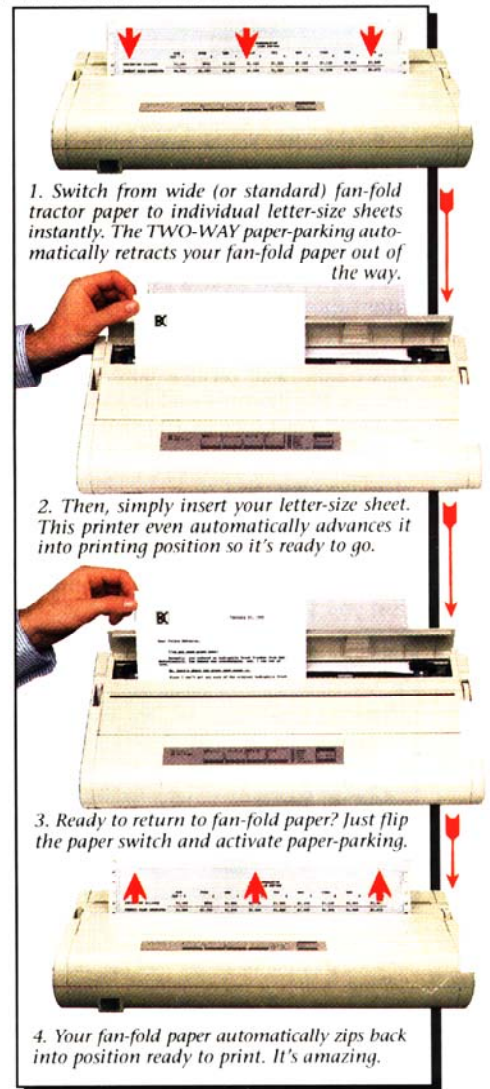

BUT, IT'S THE PRINT QUALITY

If you use ribbon cartridge printers, you've probably noticed how the print quality deteriorates as the ribbon is used.

Well, with Kodak's 'plain paper' ink-jet cartridges, the print quality of the last character on your last page will be as razor-sharp as the first character on your first page.

You can print on virtually any paper you'd like (you can even print directly on envelopes and ink-jet transparencies).

Plus, this amazing printer's high-resolution 192-dpi graphics print quality leaves most dot-matrix printers in the dust.

1. Switch from wide (or standard) fan-fold tractor paper to individual letter-size sheets instantly. The TWO-WAY paper-parking automatically retracts your fan-fold paper out of the way.

2. Then, simply insert your letter-size sheet. This printer even automatically advances it into printing position so it's ready to go.

3. Ready to return to fan-fold paper? Just flip the paper switch and activate paper-parking.

4. Your fan-fold paper automatically zips back into position ready to print. It's amazing.

FREE BONUS SOFTWARE!

Look at all the valuable name-brand software bonuses I've included **FREE** with your Diconix ink-jet printer:

- **\$495 WordStar 5.5 Professional Word Processing Program ... FREE**
- **\$247⁵⁰ Quattro Spreadsheet Program ... FREE**

- **\$149 KeyChart Custom Chart Program ... FREE**

finish your work (especially when you're not being bombarded by the jack-hammer audio assault of an impact printer).

There's so much to explore about this work-bashing 192-DPI graphics printer AND the \$1,070 in **FREE** bonuses that I could go on for pages. But, first let's find out how an amazing discovery by Kodak has started a computer printing revolution.

INK-JET PRINTING ON REGULAR PAPER

They're lightning-fast and whisper-quiet. And, when you compare them to slow, noisy dot-matrix and daisy-wheel printers, ink-jet printers are in a class by themselves.

Unfortunately, until just recently, ink-jet printers had a catch. They needed a special clay-coated paper to produce sharp

Just touch a button on the automated control panel to choose between letter-quality, NLQ, draft, script, or condensed typefaces at 10 or 12 characters-per-inch.

With this printer's blazing speed (310-cps Draft, 73-cps NLQ and 48-cps Quality), your work will be finished in no time.

And, look at this. An independent testing division of Dunn and Bradstreet rated **Kodak's Diconix 300w as the smallest** (Next Page Please ...
